1st Ayd® Air Tool Conditioner

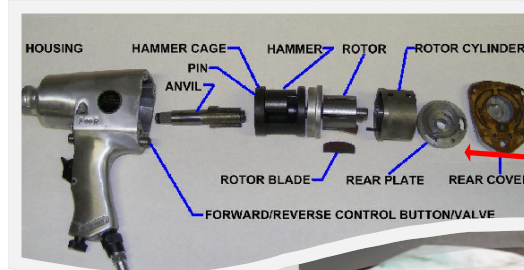

- Migrates into close tolerance tool parts for superb lubrication
- Stays fluid and will reduce dirt buildup on internal parts
- Drives out moisture and grit leaving PTFE protection behind
- **Saves you money! Pennies per treatment**

1st Ayd's **AIR TOOL CONDITIONER** is a unique product designed to provide you with immediate cleaning, with additives containing an anti-friction package that will also purge & lubricate your air tools for extended life.

PTFE provides more protection than plain air tool oil

- Reduces friction and extends tool life
- Reduced time on air tool maintenance
- **Purges contaminants** from the tool
- More power available, quieter operation, smoother performance
- Less down time and inconvenience

These parts will be coated with PTFE

The grit is now **gone!**

3 Easy Steps

Ask for a demonstration and free sample!*

1 Pull the trigger to open the valve

Insert the pinpoint straw then spray a generous amount into the air inlet. Allow to stand for 3-5 minutes to dissolve the built up contaminants. Do all your tools at the same time, best at the end of the day or week.

2 Place a clean white wiper or cloth

over the discharge vents and operate the tool for 10-15 seconds. **Caution!** Lots of dirt may fly!

3 Repeat 2 or three times if this is

the very first treatment. You will likely get more buildup purged on the second or third time. If the dirt continues to come out, repeat until clear. Now the grit that wears out your tools prematurely is gone, and will not build up due to the Teflon coating now covering the critical tool parts.

After initial purge, 1 time is usually sufficient.

*To qualified industrial or maintenance/repair accounts
