* - per MSDS - typ ±5% - some of these may be by weight (MSDS unclear) - will be 3-5% higher by volume

** - contains ethylene/propylene glycol - antifreeze - not good for H2O injection.

Most deicers have ethylene glycol or propylene glycol - don't use - bad if gets in oil

Don't use summer formula or all season unless listed here (or can confirm meth%)

- RainX/Blue Corral brand is not good - meth. vol. is low/unpredictable
